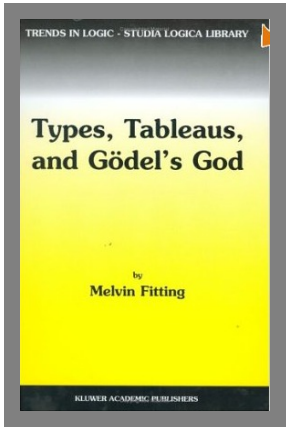
Formalization, Mechanization and Automation of Gödel's Proof of God's Existence

Christoph Benzmüller and **Bruno Woltzenlogel Paleo**

November 1, 2013



$$\dfrac{\dfrac{\text{Axiom 3}}{P(G)} \qquad \dfrac{\dfrac{\text{Theorem 1}}{\forall\varphi.[P(\varphi) \rightarrow \Diamond\exists x.\varphi(x)]}\,\forall_E}{P(G) \rightarrow \Diamond\exists x.G(x)}\,\rightarrow_E}{\Diamond\exists x.G(x)}$$

A gift to **Priest Edvaldo** and his church in Piracicaba, Brazil

Formel von Kurt Gödel: Mathematiker bestätigen Gottesbeweis

Von Tobias Hürter

picture-alliance/ Imagno/ Wiener Stadt- und Landesbibliothek

Kurt Gödel (um das Jahr 1935): Der Mathematiker hielt seinen Gottesbeweis jahrzehntelang geheim

Ein Wesen existiert, das alle positiven Eigenschaften in sich vereint. Das bewies der legendäre Mathematiker Kurt Gödel mit einem komplizierten Formelgebilde. Zwei Wissenschaftler haben diesen Gottesbeweis nun überprüft - und für gültig befunden.

Jetzt sind die letzten Zweifel ausgeräumt: Gott existiert tatsächlich. Ein Computer hat es mit kalter Logik bewiesen - das MacBook des Computerwissenschaftlers Christoph Benzmüller von der Freien Universität Berlin.

Researchers say they used MacBook to prove Goedel's God theorem

Oct. 23, 2013 | 8:14 PM | 1 comments

Are we in contact with Steve Jobs? No

Do you really need a MacBook to obtain the results? No

Is Apple sending us money? No

(but maybe they should)

Researchers say they used MacBook to prove Goedel's God theorem

Oct. 23, 2013 | 8:14 PM | 1 comments

Are we in contact with Steve Jobs? No

Do you really need a MacBook to obtain the results? No

Is Apple sending us money? No
(but maybe they should)

Def: Ontological Argument/Proof

* deductive argument
* for the existence of God
* starting from premises, which are justified by pure reasoning, i.e. they do not depend on observation in the world.

Existence of God: different types of arguments/proofs

- a posteriori (use experience/observation in the world)
  - teleological
  - cosmological
  - moral
  - ...
- a priori (based on pure reasoning, independent)
  - ontological argument
    - definitional
    - modal
    - ...
  - other a priori arguments

Def: Ontological Argument/Proof

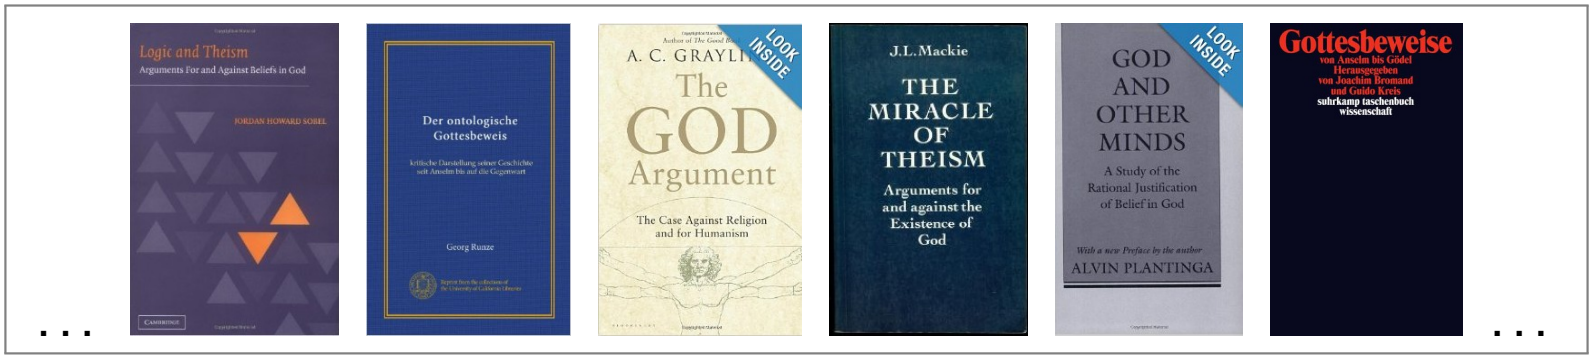
* deductive argument
* for the existence of God
* starting from premises, which are justified by pure reasoning, i.e. they do not depend on observation in the world.

Existence of God: different types of arguments/proofs

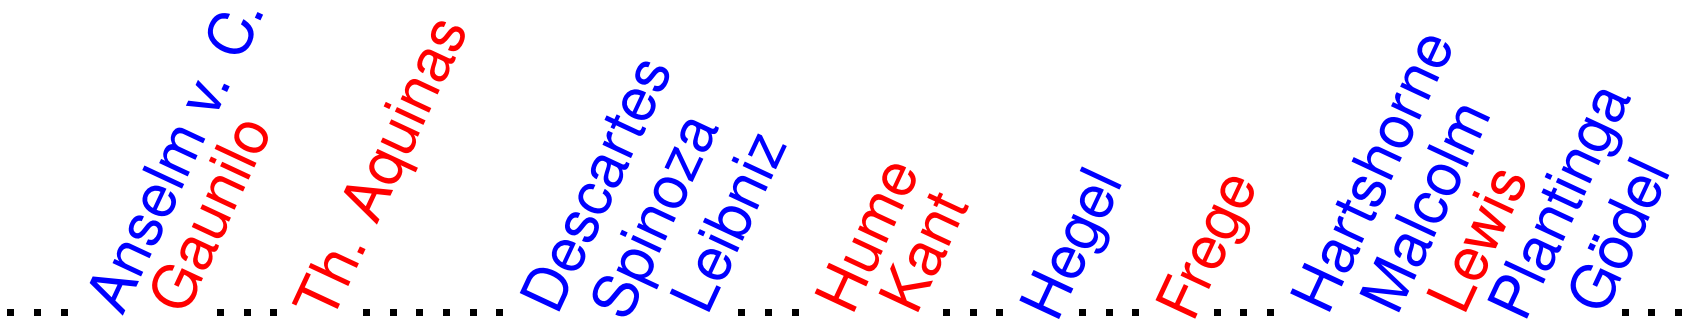
- a posteriori (use experience/observation in the world)
  - teleological
  - cosmological
  - moral
  - ...
- a priori (based on pure reasoning, independent)
  - ontological argument
    - definitional
    - modal
    - ...
  - other a priori arguments

Wohl eine jede Philosophie kreist um den ontologischen Gottesbeweis

(Adorno, Th. W.: Negative Dialektik. Frankfurt a. M. 1966, p.378)



Rich history on ontological arguments (pros and cons)



Anselm's notion of God:

"God is that, than which nothing greater can be conceived."

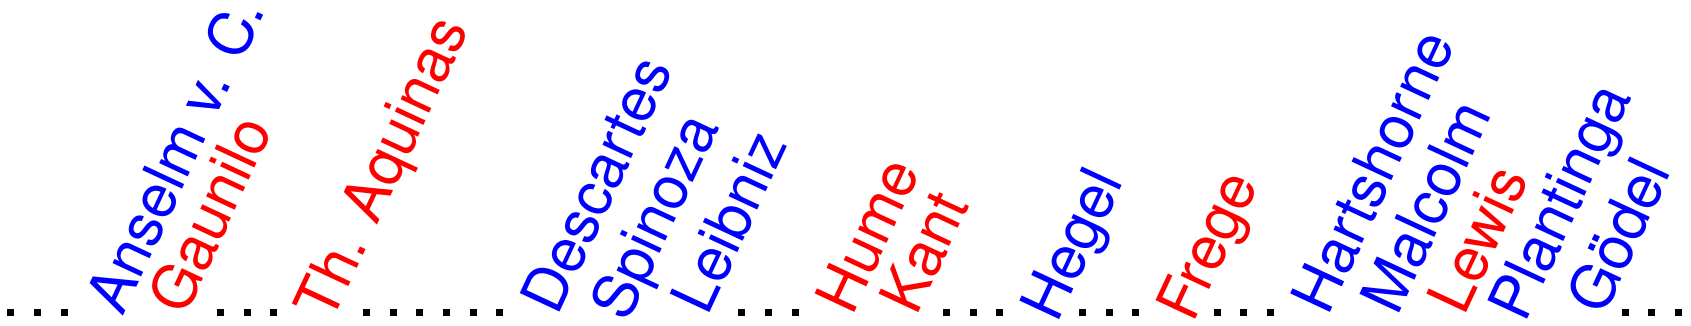
Gödel's notion of God:

"A God-like being possesses all 'positive' properties."

To show by logical reasoning:

"(Necessarily) God exists."

Rich history on ontological arguments (pros and cons)



Anselm's notion of God:

"God is that, than which nothing greater can be conceived."

Gödel's notion of God:

"A God-like being possesses all 'positive' properties."

To show by logical reasoning:

"(Necessarily) God exists."

Different Interests in Ontological Arguments:

- Philosophical: Boundaries of Metaphysics & Epistemology
  - We talk about a metaphysical concept (God),
  - but we want to draw a conclusion for the real world.
  - Necessary Existence (NE): metaphysical NE vs. logical NE vs. modal NE
- Theistic: Successful argument should convince atheists
- Ours: Can computers (theorem provers) be used . . .
  - . . . to formalize the definitions, axioms and theorems?
  - . . . to verify the arguments step-by-step?
  - . . . to fully automate (sub-)arguments?

"Computer-assisted Theoretical Philosophy"

Challenge: No provers for *Higher-order Quantified Modal Logic* (QML)

Our solution: Embedding in *Higher-order Classical Logic* (HOL)

[BenzmüllerPaulson, Logica Universalis, 2013]

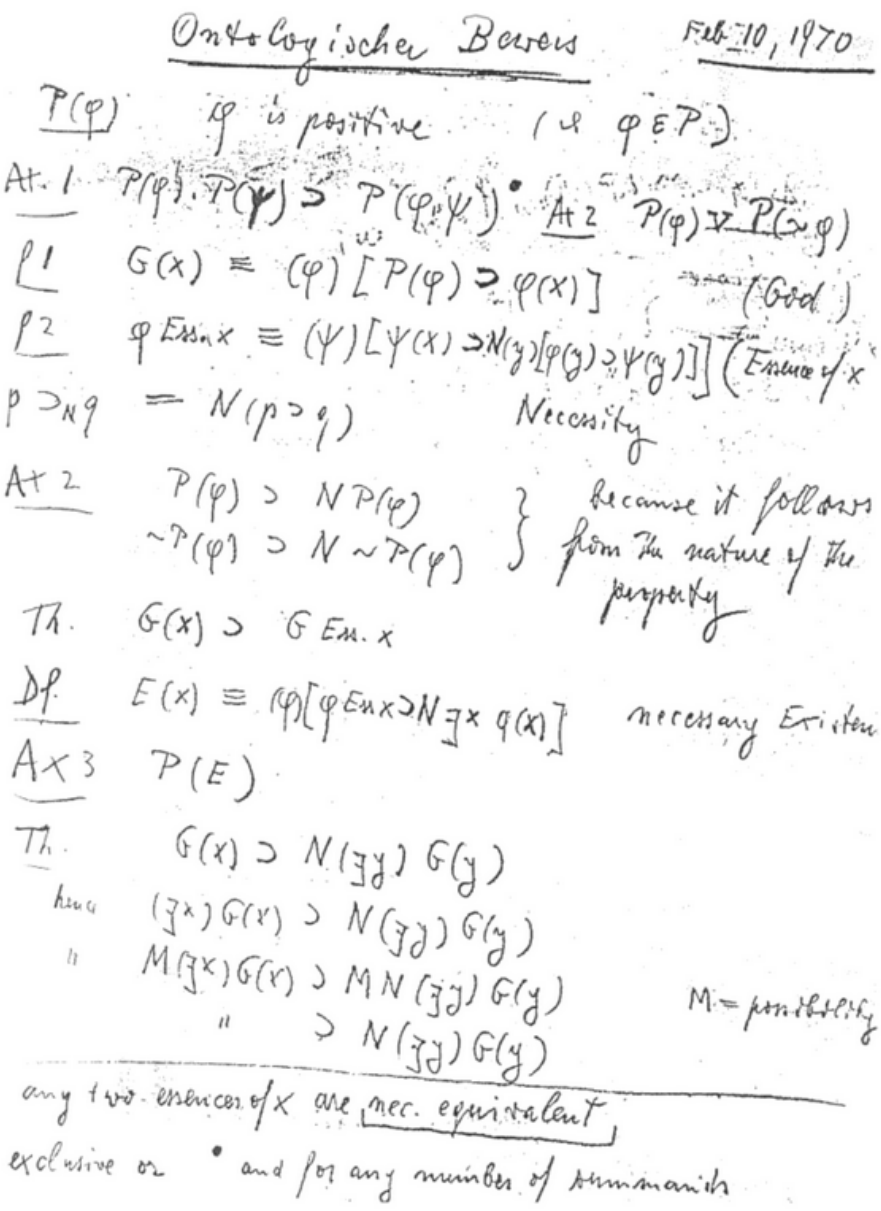
What we did (rough outline for remaining presentation!):

A:	Pen and paper:	detailed natural deduction proof
B:	Formalization:	in classical higher-order logic (HOL)
	Automation:	theorem provers Leo-II and Satallax
	Consistency:	model finder Nitpick (Nitrox)
C:	Step-by-step verification:	proof assistant Coq
D:	Automation & verification:	proof assistant Isabelle

Did we get any new results? Yes — let's discuss this later!

Part A:
Informal Proof and Natural Deduction Proof

Gödel's Manuscript (1970)



Ontologischer Beweis Feb 10, 1970

$P(\varphi)$ φ is positive ($\varphi \in P$)

Ax. 1 $P(\varphi) \cdot P(\psi) \supset P(\varphi \cdot \psi)$ · Ax 2 $P(\varphi) \vee P(\sim\varphi)$

D1 $G(x) \equiv (\varphi)[P(\varphi) \supset \varphi(x)]$ (God)

D2 $\varphi \, Ess.x \equiv (\psi)[\psi(x) \supset N(y)[\varphi(y) \supset \psi(y)]]$ (Essence of x

$p \supset_N q \;=\; N(p \supset q)$ Necessity

Ax 2 $P(\varphi) \supset N P(\varphi)$ } because it follows
$\sim P(\varphi) \supset N \sim P(\varphi)$ } from the nature of the property

Th. $G(x) \supset G \, Ess. \, x$

Df. $E(x) \equiv (\varphi)[\varphi \, Ess \, x \supset N \exists x \, \varphi(x)]$ necessary Existen

Ax 3 $P(E)$

Th. $G(x) \supset N(\exists y) \, G(y)$

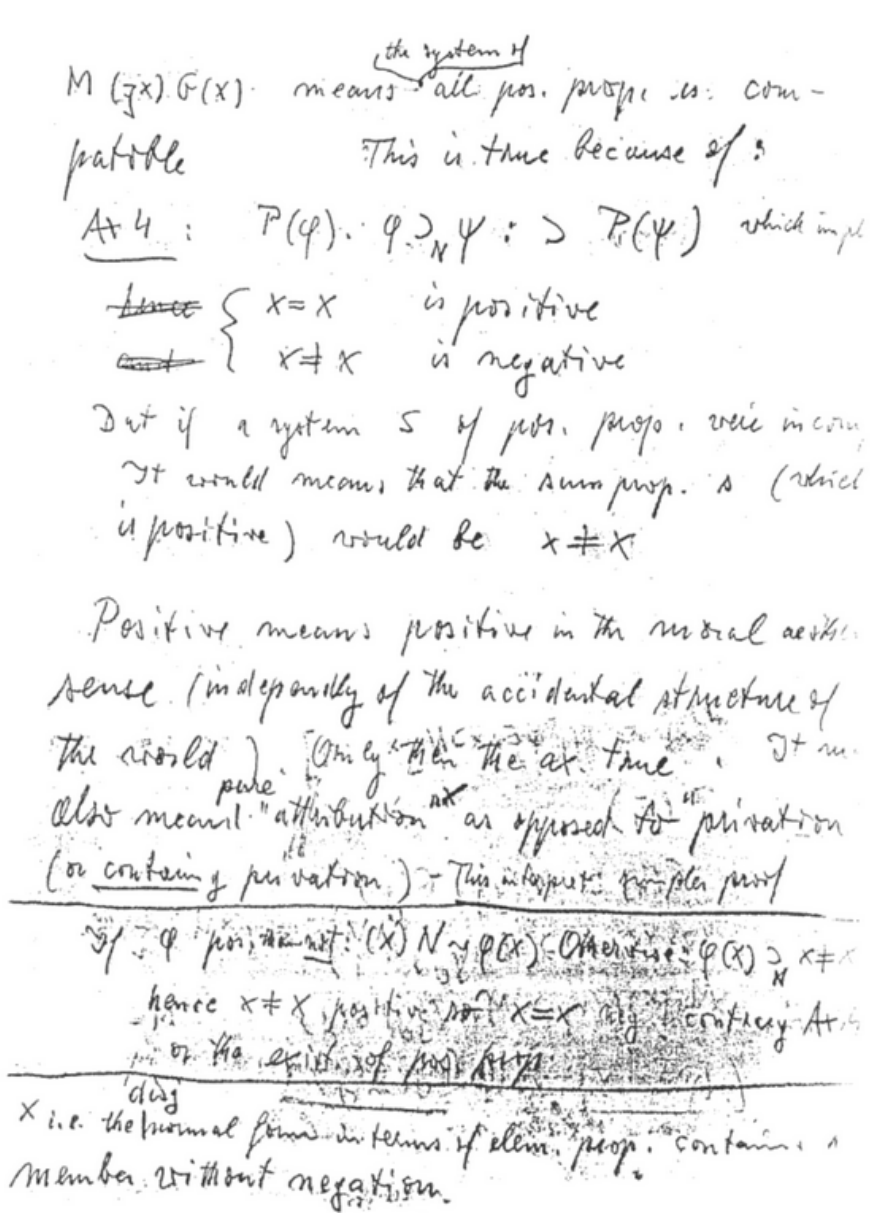
hence $(\exists x) G(x) \supset N(\exists y) G(y)$

" $M(\exists x) G(x) \supset MN(\exists y) G(y)$ M = possibility

" $\supset N(\exists y) G(y)$

any two essences of x are nec. equivalent

exclusive or · and for any number of summands



M $(\exists x) G(x)$ means (the system of) all pos. prop. is com-patible This is true because of:

Ax 4: $P(\varphi) \cdot \varphi \supset_N \psi : \supset P(\psi)$ which imp

~~three~~ $\begin{cases} x = x & \text{is positive} \\ ~~x \neq x~~ & \text{is negative} \end{cases}$

But if a system S of pos. prop. were in con
It would mean that the sum prop. is (whic
is positive) would be $x \neq x$

Positive means positive in the moral aesth
sense (independly of the accidental structure of
the world). Only then the ax. true. It m
also meant "attribution" as opposed to "privation
(or containg privation) - This interpret. implies proof

If φ pos. then not $(x) \, N \sim \varphi(x)$. Otherwise $\varphi(x) \supset_N x \neq x$
hence $x \neq x$ positive so $x = x$ by contrary Ax 4
or the exist. of pos. prop.

dieg

x i.e. the normal form in terms of elem. prop. contains a
member without negation.

Scott's Version of Gödel's Axioms, Definitions and Theorems

A1 Either a property or its negation is positive, but not both: $\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$

A2 A property necessarily implied by a positive property is positive: $\forall\phi\forall\psi[(P(\phi) \wedge \Box\forall x[\phi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$

T1 Positive properties are possibly exemplified: $\forall\varphi[P(\varphi) \rightarrow \Diamond\exists x\varphi(x)]$

D1 A *God-like* being possesses all positive properties: $G(x) \leftrightarrow \forall\phi[P(\phi) \rightarrow \phi(x)]$

A3 The property of being God-like is positive: $P(G)$

C Possibly, God exists: $\Diamond\exists x G(x)$

A4 Positive properties are necessarily positive: $\forall\phi[P(\phi) \rightarrow \Box\, P(\phi)]$

D2 An *essence* of an individual is a property possessed by it and necessarily implying any of its properties: $\phi\ ess.\ x \leftrightarrow \phi(x) \wedge \forall\psi(\psi(x) \rightarrow \Box\forall y(\phi(y) \rightarrow \psi(y)))$

T2 Being God-like is an essence of any God-like being: $\forall x[G(x) \rightarrow G\ ess.\ x]$

D3 *Necessary existence* of an individual is the necessary exemplification of all its essences: $NE(x) \leftrightarrow \forall\phi[\phi\ ess.\ x \rightarrow \Box\exists y\phi(y)]$

A5 Necessary existence is a positive property: $P(NE)$

T3 Necessarily, God exists: $\Box\exists x G(x)$

Proof Overview

D1: $G(x) \equiv \forall\varphi.[P(\varphi) \rightarrow \varphi(x)]$

D2: $\varphi \; ess \; x \equiv \varphi(x) \wedge \forall\psi.(\psi(x) \rightarrow \Box\forall x.(\varphi(x) \rightarrow \psi(x)))$

D3: $E(x) \equiv \forall\varphi.[\varphi \; ess \; x \rightarrow \Box\exists y.\varphi(y)]$

$$\dfrac{\dfrac{\mathbf{A3}\quad P(G) \qquad \dfrac{\mathbf{A2}\quad \forall\varphi.\forall\psi.[(P(\varphi) \wedge \Box\forall x.[\varphi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)] \qquad \mathbf{A1a}\quad \forall\varphi.[P(\neg\varphi) \rightarrow \neg P(\varphi)]}{\mathbf{T1}: \forall\varphi.[P(\varphi) \rightarrow \Diamond\exists x.\varphi(x)]}}{\mathbf{C1}: \Diamond\exists x.G(x)}$$

$$\dfrac{\dfrac{\dfrac{\mathbf{A1b}\quad \forall\varphi.[\neg P(\varphi) \rightarrow P(\neg\varphi)] \qquad \mathbf{A4}\quad \forall\varphi.[P(\varphi) \rightarrow \Box P(\varphi)]}{\mathbf{T2}: \forall y.[G(y) \rightarrow G \; ess \; y]} \qquad \mathbf{A5}\quad P(E)}{\mathbf{L1}: \exists z.G(z) \rightarrow \Box\exists x.G(x)}}{\dfrac{\Diamond\exists z.G(z) \rightarrow \Diamond\Box\exists x.G(x) \qquad \mathbf{S5}\quad \forall\xi.[\Diamond\Box\xi \rightarrow \Box\xi]}{\mathbf{L2}: \Diamond\exists z.G(z) \rightarrow \Box\exists x.G(x)}}$$

$$\dfrac{\mathbf{C1}: \Diamond\exists x.G(x) \qquad \mathbf{L2}: \Diamond\exists z.G(z) \rightarrow \Box\exists x.G(x)}{\mathbf{T3}: \Box\exists x.G(x)}$$

Natural Deduction Calculus

$$\frac{A \vee B \quad \begin{array}{c}\overline{A}\\ \vdots \\ C\end{array} \quad \begin{array}{c}\overline{B}\\ \vdots \\ C\end{array}}{C}\ \vee_E \qquad \frac{A \quad B}{A \wedge B}\ \wedge_I \qquad \frac{\begin{array}{c}\overline{A}^{\,n}\\ \vdots \\ B\end{array}}{A \to B}\ \to^n_I$$

$$\frac{A}{A \vee B}\ \vee_{I_1} \qquad \frac{A \wedge B}{A}\ \wedge_{E_1} \qquad \frac{B}{A \to B}\ \to_I$$

$$\frac{B}{A \vee B}\ \vee_{I_2} \qquad \frac{A \wedge B}{B}\ \wedge_{E_2} \qquad \frac{A \quad A \to B}{B}\ \to_E$$

$$\frac{A[\alpha]}{\forall x.A[x]}\ \forall_I \qquad \frac{\forall x.A[x]}{A[t]}\ \forall_E \qquad \frac{A[t]}{\exists x.A[x]}\ \exists_I \qquad \frac{\exists x.A[x]}{A[\beta]}\ \exists_E$$

$$\neg A \equiv A \to \bot \qquad \frac{\neg\neg A}{A}\ \neg\neg_E$$

$$\frac{\alpha : \boxed{\begin{array}{c}\vdots\\ A\end{array}}}{\Box A}\ \Box_I \qquad \frac{\Box A}{t : \boxed{\begin{array}{c}A\\ \vdots\end{array}}}\ \Box_E$$

$$\frac{t : \boxed{\begin{array}{c}\vdots\\ A\end{array}}}{\Diamond A}\ \Diamond_I \qquad \frac{\Diamond A}{\beta : \boxed{\begin{array}{c}A\\ \vdots\end{array}}}\ \Diamond_E$$

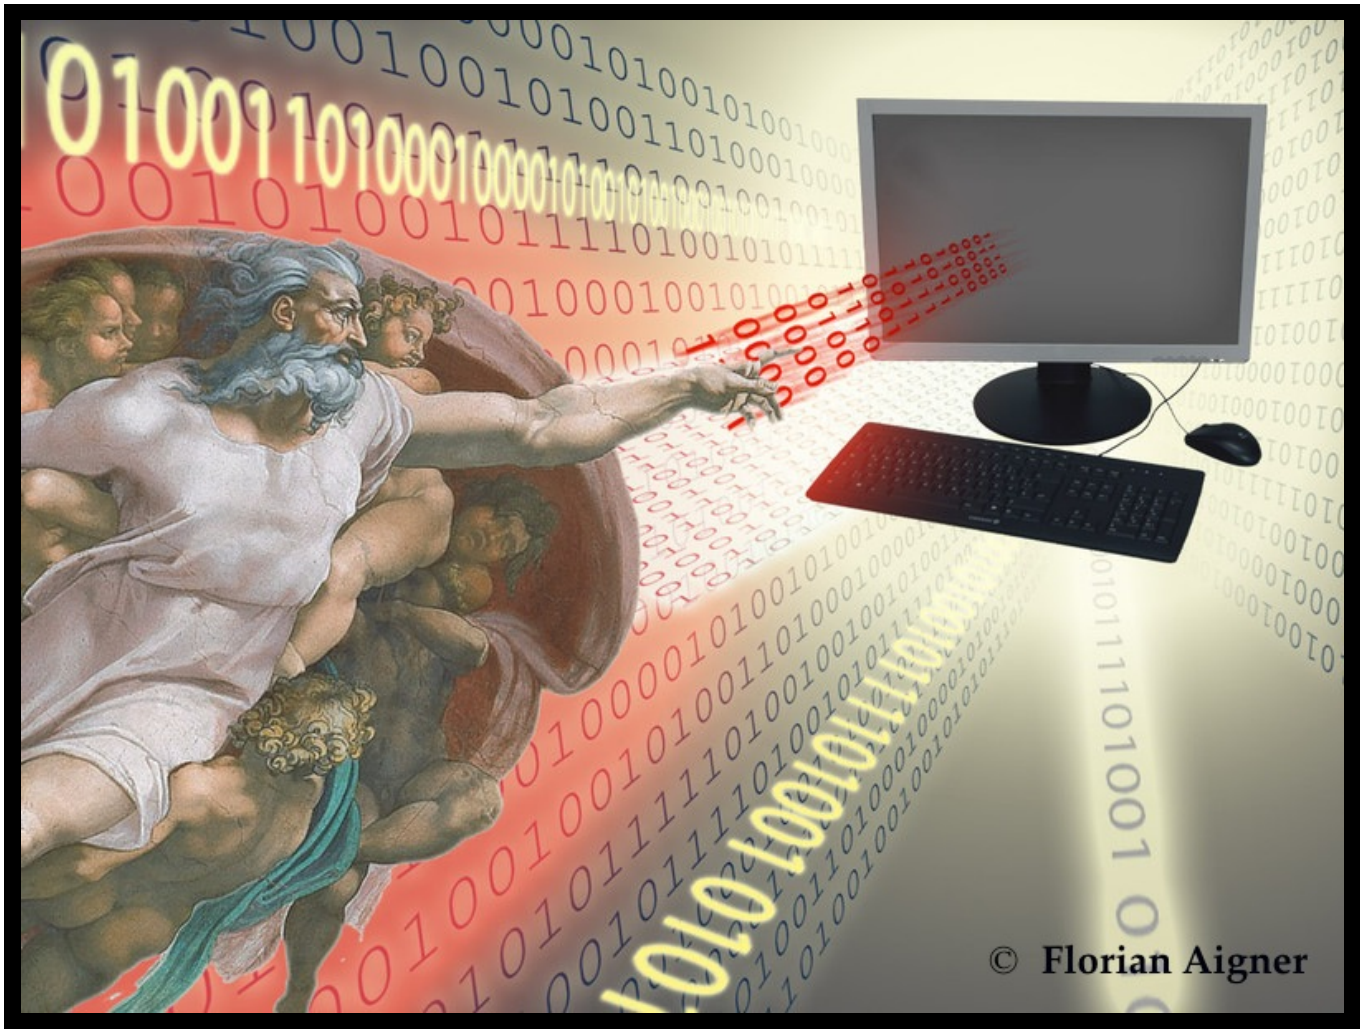
$$\Diamond A \equiv \neg\Box\neg A$$

$$\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{\dfrac{}{\forall\varphi.\forall\psi.[(P(\varphi)\wedge\Box\forall x.[\varphi(x)\rightarrow\psi(x)])\rightarrow P(\psi)]}\,\mathbf{A2}}{\forall\psi.[(P(\rho)\wedge\Box\forall x.[\rho(x)\rightarrow\psi(x)])\rightarrow P(\psi)]}\,\forall_E}{(P(\rho)\wedge\Box\forall x.[\rho(x)\rightarrow\neg\rho(x)])\rightarrow P(\neg\rho)}\,\forall_E}{(P(\rho)\wedge\Box\forall x.[\neg\rho(x)])\rightarrow P(\neg\rho)} \qquad \dfrac{\dfrac{}{\forall\varphi.[P(\neg\varphi)\rightarrow\neg P(\varphi)]}\,\mathbf{A1a}}{P(\neg\rho)\rightarrow\neg P(\rho)}\,\forall_E}{(P(\rho)\wedge\Box\forall x.[\neg\rho(x)])\rightarrow\neg P(\rho)}}{P(\rho)\rightarrow\Diamond\exists x.\rho(x)}}{\forall\varphi.[P(\varphi)\rightarrow\Diamond\exists x.\varphi(x)]}\,\forall_I$$

$$\dfrac{\dfrac{}{P(G)}\,\mathbf{A3} \qquad \dfrac{\dfrac{}{\forall\varphi.[P(\varphi)\rightarrow\Diamond\exists x.\varphi(x)]}\,\mathbf{T1}}{P(G)\rightarrow\Diamond\exists x.G(x)}\,\forall_E}{\Diamond\exists x.G(x)}\,\rightarrow_E$$

$$\dfrac{\psi(x)^6 \qquad \dfrac{\overset{\Pi_2}{\overline{\psi(x) \to \Box P(\psi)}}}{\Box P(\psi)} \to_E \qquad \dfrac{\dfrac{\dfrac{\Box P(\psi)^7}{P(\psi)} \Box_E \qquad \dfrac{\overset{\Pi_3}{\overline{P(\psi) \to \forall x.(G(x) \to \psi(x))}}}{\forall x.(G(x) \to \psi(x))} \to_E}{\Box \forall x.(G(x) \to \psi(x))} \Box_I}{\Box P(\psi) \to \Box \forall x.(G(x) \to \psi(x))} \to_I^7}{\Box \forall x.(G(x) \to \psi(x))} \to_E$$

$$\dfrac{\Box \forall x.(G(x) \to \psi(x))}{\psi(x) \to \Box \forall x.(G(x) \to \psi(x))} \to_I^6$$



Part B:

Formalization: in classical higher-order logic (HOL)
Automation: theorem provers Leo-II and Satallax
Consistency: model finder Nitpick (Nitrox)

Formalization in HOL

Challenge: No provers for *Higher-order Quantified Modal Logic* (QML)

Our solution: Embedding in *Higher-order Classical Logic* (HOL)
Then use existing HOL theorem provers for reasoning in QML

[BenzmüllerPaulson, Logica Universalis, 2013]

Previous empiricial findings:

Embedding of *First-order Modal Logic* in HOL works well

[BenzmüllerOttenRaths, ECAI, 2012]

[Benzmüller, LPAR, 2013]

Formalization in HOL

QML $\varphi, \psi \quad ::= \quad \ldots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x\,\varphi \mid \exists x\,\varphi \mid \forall P\,\varphi$

- Kripke style semantics (possible world semantics)

HOL $s, t \quad ::= \quad C \mid x \mid \lambda x s \mid s\,t \mid \neg s \mid s \vee t \mid \forall x\,t$

- meanwhile very well understood
- **Henkin semantics** vs. standard semantics
- various theorem provers do exists

  interactive: Isabelle/HOL, HOL4, Hol Light, Coq/HOL, PVS, ...

  automated: TPS, LEO-II, Satallax, Nitpick, Isabelle/HOL, ...

Formalization in HOL

QML $\quad \varphi, \psi \quad ::= \quad \ldots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x\,\varphi \mid \exists x\,\varphi \mid \forall P\,\varphi$

HOL $\quad s, t \quad ::= \quad C \mid x \mid \lambda x s \mid s\,t \mid \neg s \mid s \vee t \mid \forall x\,t$

QML in HOL: QML formulas φ are mapped to HOL predicates $\varphi_{\iota\rightarrow o}$

$$
\begin{array}{lcl}
\neg & = & \lambda\varphi_{\iota\rightarrow o}\lambda s_\iota \neg\varphi s \\
\wedge & = & \lambda\varphi_{\iota\rightarrow o}\lambda\psi_{\iota\rightarrow o}\lambda s_\iota(\varphi s \wedge \psi s) \\
\rightarrow & = & \lambda\varphi_{\iota\rightarrow o}\lambda\psi_{\iota\rightarrow o}\lambda s_\iota(\neg\varphi s \vee \psi s) \\
\Box & = & \lambda\varphi_{\iota\rightarrow o}\lambda s_\iota\forall u_\iota\,(\neg rsu \vee \varphi u) \\
\Diamond & = & \lambda\varphi_{\iota\rightarrow o}\lambda s_\iota\exists u_\iota\,(rsu \wedge \varphi u) \\
\forall & = & \lambda h_{\mu\rightarrow(\iota\rightarrow o)}\lambda s_\iota\forall d_\mu\,hds \\
\exists & = & \lambda h_{\mu\rightarrow(\iota\rightarrow o)}\lambda s_\iota\exists d_\mu\,hds \\
\forall & = & \lambda H_{(\mu\rightarrow(\iota\rightarrow o))\rightarrow(\iota\rightarrow o)}\lambda s_\iota\forall d_\mu\,Hds \\
 & & \\
\text{valid} & = & \lambda\varphi_{\iota\rightarrow o}\forall w_\iota\varphi w
\end{array}
$$

Ax

The equations in Ax are given as axioms to the HOL provers!

(Remark: Note that we are here dealing with constant domain quantification)

Formalization in HOL

QML $\quad \varphi, \psi \quad ::= \quad \ldots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x\,\varphi \mid \exists x\,\varphi \mid \forall P\,\varphi$

HOL $\quad s, t \quad ::= \quad C \mid x \mid \lambda x s \mid s\,t \mid \neg s \mid s \vee t \mid \forall x\,t$

QML in HOL: QML formulas φ are mapped to HOL predicates $\varphi_{\iota\to o}$

$$
\begin{array}{lcl}
\neg & = & \lambda\varphi_{\iota\to o}\lambda s_\iota \neg\varphi s \\
\wedge & = & \lambda\varphi_{\iota\to o}\lambda\psi_{\iota\to o}\lambda s_\iota(\varphi s \wedge \psi s) \\
\rightarrow & = & \lambda\varphi_{\iota\to o}\lambda\psi_{\iota\to o}\lambda s_\iota(\neg\varphi s \vee \psi s) \\
\Box & = & \lambda\varphi_{\iota\to o}\lambda s_\iota \forall u_\iota\,(\neg r s u \vee \varphi u) \\
\Diamond & = & \lambda\varphi_{\iota\to o}\lambda s_\iota \exists u_\iota\,(r s u \wedge \varphi u) \\
\forall & = & \lambda h_{\mu\to(\iota\to o)}\lambda s_\iota \forall d_\mu\, h d s \\
\exists & = & \lambda h_{\mu\to(\iota\to o)}\lambda s_\iota \exists d_\mu\, h d s \\
\forall & = & \lambda H_{(\mu\to(\iota\to o))\to(\iota\to o)}\lambda s_\iota \forall d_\mu\, H d s \\
 & & \\
\text{valid} & = & \lambda\varphi_{\iota\to o}\forall w_\iota \varphi w
\end{array}
$$

Ax

The equations in Ax are given as axioms to the HOL provers!

(Remark: Note that we are here dealing with constant domain quantification)

Formalization in HOL

QML $\quad \varphi, \psi \quad ::= \quad \ldots \mid \neg\varphi \mid \varphi \wedge \psi \mid \varphi \rightarrow \psi \mid \Box\varphi \mid \Diamond\varphi \mid \forall x\,\varphi \mid \exists x\,\varphi \mid \forall P\,\varphi$

HOL $\quad s, t \quad ::= \quad C \mid x \mid \lambda x s \mid s\,t \mid \neg s \mid s \vee t \mid \forall x\,t$

QML in HOL: QML formulas φ are mapped to HOL predicates $\varphi_{\iota\rightarrow o}$

$$
\begin{array}{lcl}
\neg & = & \lambda\varphi_{\iota\rightarrow o}\lambda s_\iota \neg\varphi s \\

\end{array}
$$

Ax

The equations in Ax are given as axioms to the HOL provers!

(Remark: Note that we are here dealing with constant domain quantification)

Example

QML formula	$\Diamond\exists x G(x)$
QML formula in HOL	valid $(\Diamond\exists x G(x))_{\iota\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\iota (\Diamond\exists x G(x))_{\iota\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\iota \exists u_\iota (rwu \wedge (\exists x G(x))_{\iota\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\iota \exists u_\iota (rwu \wedge \exists x G x u)$

What are we doing?

In order to prove that φ is valid in QML,
–> we instead prove that valid $\varphi_{\iota\to o}$ can be derived from Ax in HOL.

This can be done with interactive or automated HOL theorem provers.

Expansion: user or prover may flexibly choose expansion depth

Example

QML formula	$\Diamond\exists x G(x)$
QML formula in HOL	valid $(\Diamond\exists x G(x))_{\iota\to o}$
expansion, $\beta\eta$-conversion	$\forall w_\iota (\Diamond\exists x G(x))_{\iota\to o}\, w$
expansion, $\beta\eta$-conversion	$\forall w_\iota \exists u_\iota (rwu \wedge (\exists x G(x))_{\iota\to o} u)$
expansion, $\beta\eta$-conversion	$\forall w_\iota \exists u_\iota (rwu \wedge \exists x G x u)$

What are we doing?

In order to prove that φ is valid in QML,

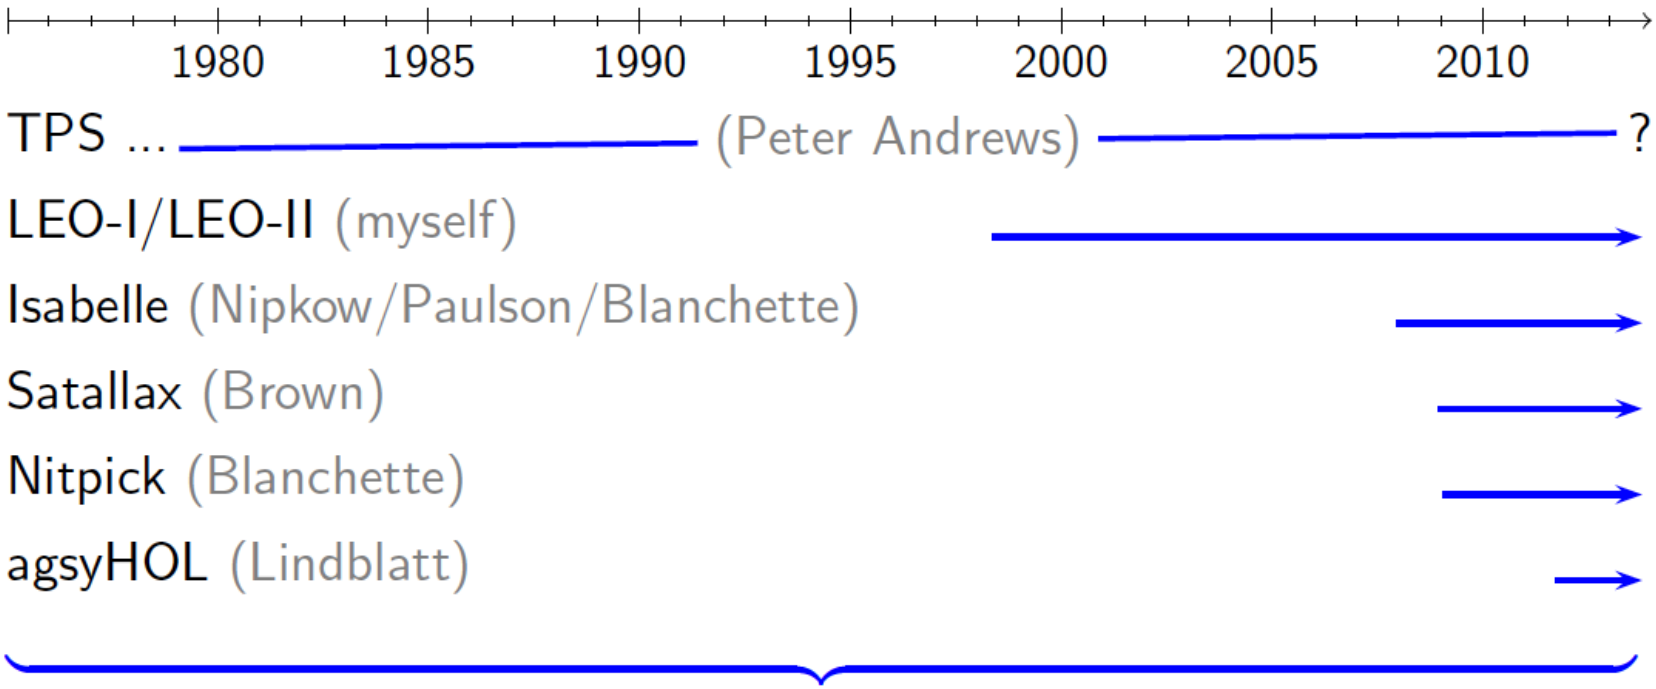
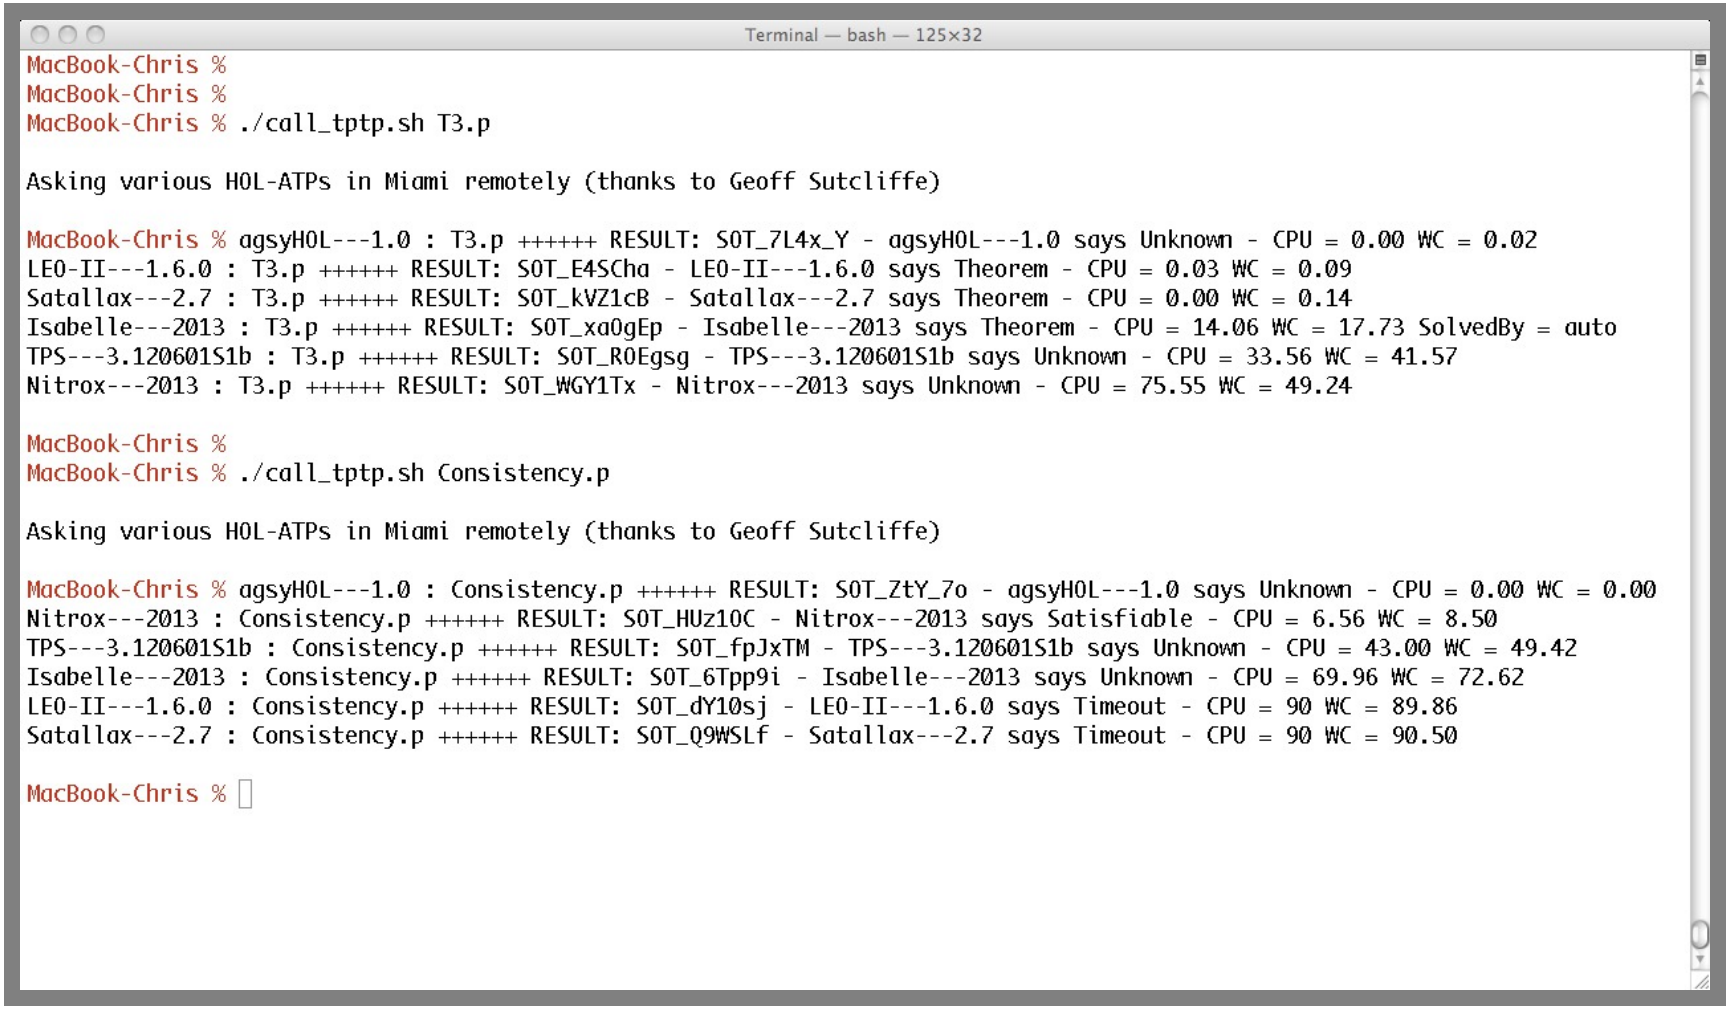
Automated Theorem Provers and Model Finders for HOL



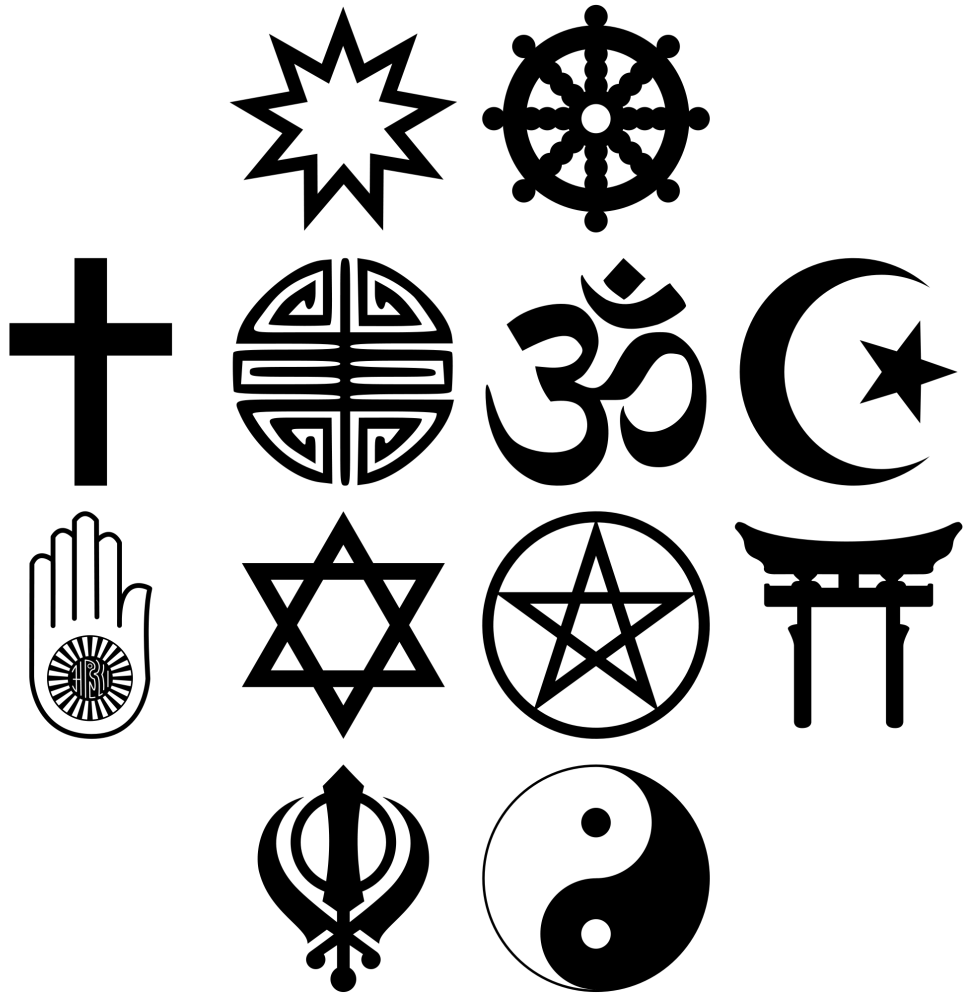
- all accept TPTP THF Syntax [SutcliffeBenzmüller, J.Form.Reas, 2009]
  - can be called remotely via SystemOnTPTP at Miami
  - they significantly gained in strength over the last years
  - they can be bundled into a combined prover HOL-P

Exploit HOL with Henkin semantics as metalogic
Automate other logics (& combinations) via semantic embeddings
— HOL-P becomes a Universal Reasoner —

Proof Automation and Consistency Checking: Demo!



Provers are called remotely in Miami — no local installation needed!



Part C:
Formalization and Verification in Coq

- Goal: verification of the natural deduction proof
  - Step-by-step formalization
  - Almost no automation (intentionally!)
- Interesting facts:
  - Embedding is transparent to the user
  - Embedding gives labeled calculus for free

- Goal: verification of the natural deduction proof
  - Step-by-step formalization
  - Almost no automation (intentionally!)

What is Isabelle?
Isabelle is a generic proof assistant. It allows mathematical formulas to be expressed in a formal language and provides tools for proving those formulas in a logical calculus. Isabelle is developed at University of Cambridge (Larry Paulson), Technische Universität München (Tobias Nipkow) and Université Paris-Sud (Makarius Wenzel). See the Isabelle overview for a brief introduction.
Now available: Isabelle2013
Download for Mac OS X
Download for Linux - Download for Windows
Some highlights:
Improvements of Isabelle/Scala and Isabelle/jEdit Prover IDE.
Advanced build tool based on Isabelle/Scala.
Updated manuals: isar-ref, implementation, system.
Pure: improved support for block-structured specification contexts.
HOL tool enhancements: Sledgehammer, Lifting, Quickcheck.
HOL library enhancements: HOL-Library, HOL-Probability, HOL-Cardinals.
HOL: New BNF-based (co)datatype package.
Improved performance thanks to Poly/ML 5.5.0.
See also the cumulative NEWS.
Distribution & Support
Isabelle is distributed for free under the BSD license. It includes source and binary packages and documentation, see the detailed installation instructions. A vast collection of Isabelle examples and applications is available from the Archive of Formal Proofs.
Support is available by ample documentation, the Isabelle community Wiki, and the following mailing lists:
isabelle-users@cl.cam.ac.uk provides a forum for Isabelle users to discuss problems, exchange information, and make announcements. Users of official Isabelle releases should subscribe or see the archive (also available via Google groups and Narkive).
isabelle-dev@in.tum.de covers the Isabelle development process, including intermediate repository versions, and administrative issues concerning the website or testing infrastructure. Early adopters of repository versions should subscribe or see the archive (also available at mail-archive.com or gmane.org).

Isabelle/HOL (Cambridge University/TU Munich)

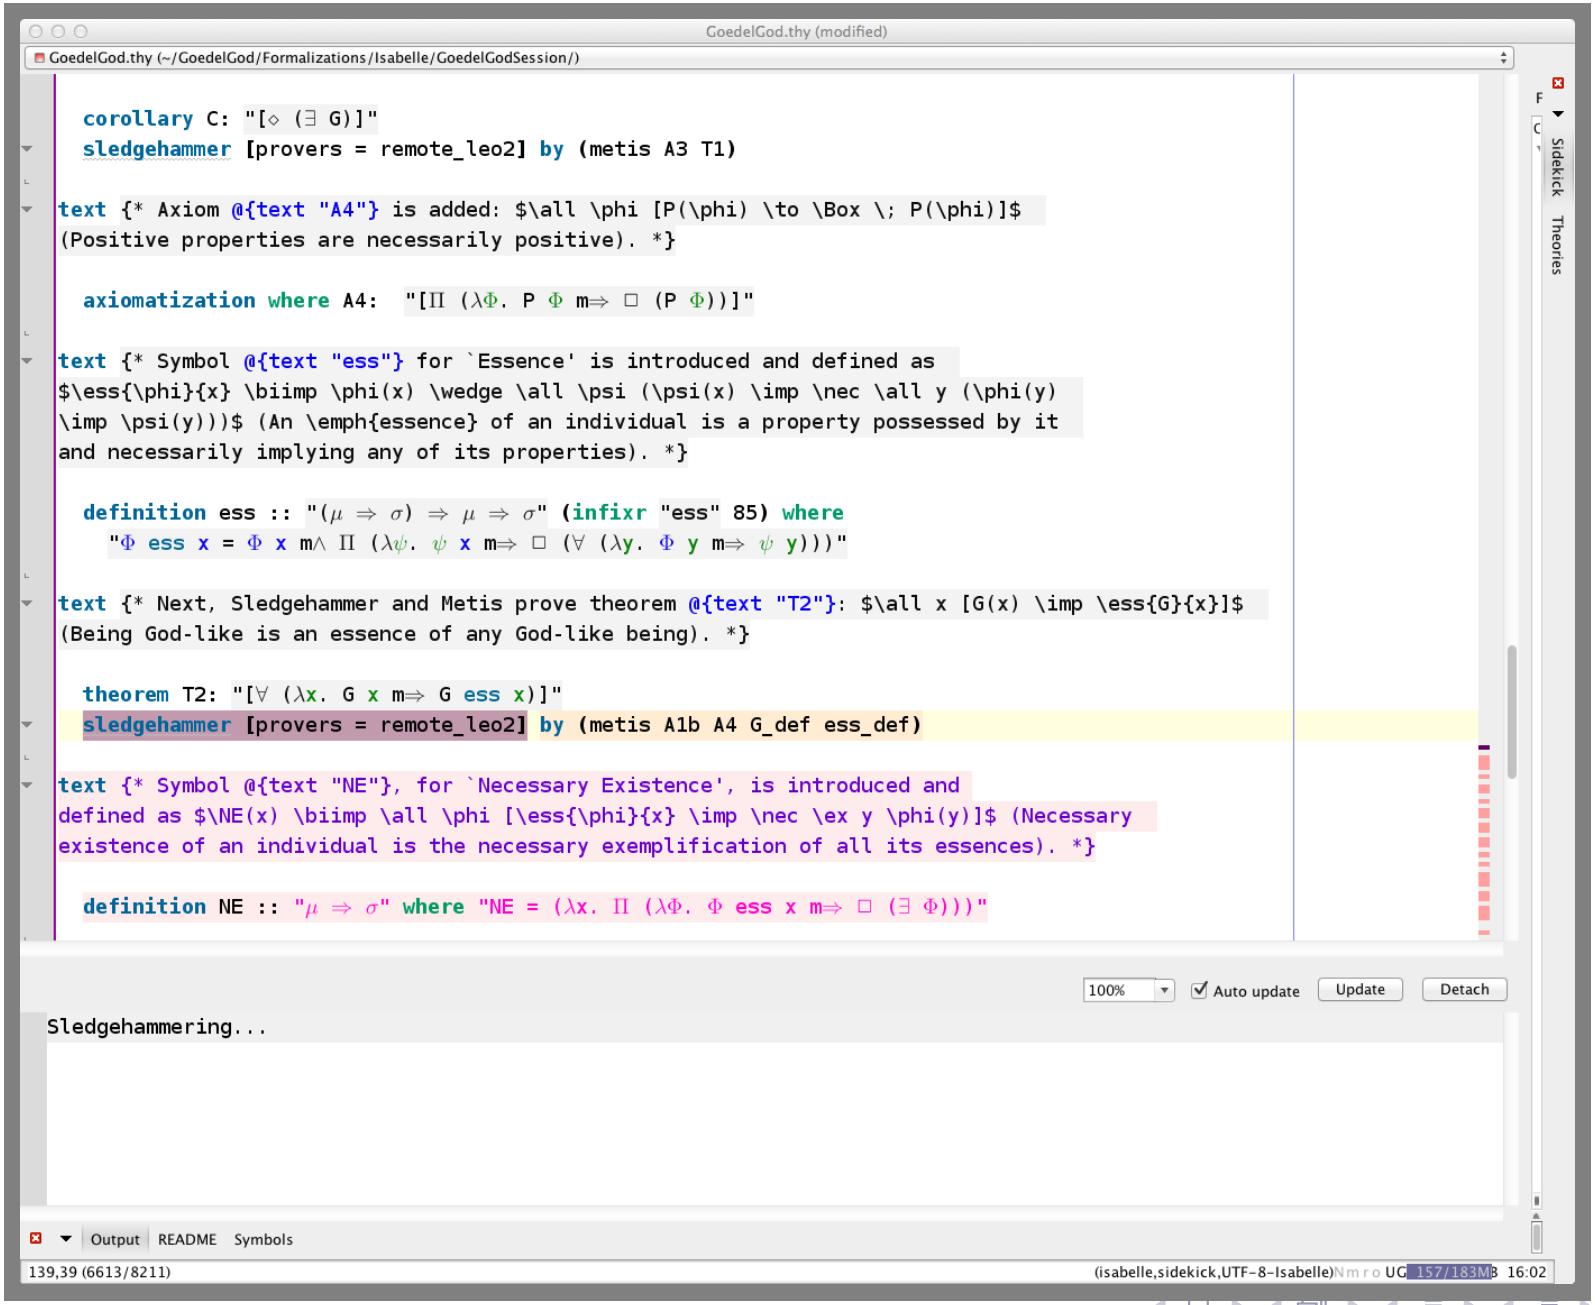
- HOL instance of the generic Isabelle proof assistant
- User interaction and proof automation
- Automation is supported by Sledgehammer tool
- Verification of the proofs in Isabelle/HOL's small proof kernel

What we did?

- Proof automation of Gödel's proof script (Scott version)
- Sledgehammer makes calls to remote THF provers in Miami
- These calls the suggest respective calls to the Metis prover
- Metis proofs are verified in Isabelle/HOL's proof kernel

See the handout (generated from the Isabelle source file).

Automation & Verification in Proof Assistant Isabelle/HOL



Part E:
Criticisms

$$\forall P.[\Diamond\Box P \rightarrow \Box P]$$

If something is possibly necessary, then it is necessary.

$\Diamond\Box(A \vee \neg A)$ $\Box(A \vee \neg A)$

logical necessity $\sim$ validity

for all $M, M \models F \longrightarrow \Box F$

logical possibility $\sim$ satisfiability

exists $M, M \models F \longrightarrow \Diamond F$

What about iterations?

$\Diamond\Box\Diamond\Diamond F$

Weak intuitions $\Rightarrow$ dozens of modal logics

S5 is considered adequate

$$\forall P.[\Diamond\Box P \rightarrow \Box P]$$

If something is possibly necessary, then it is necessary.

$$\Diamond\Box(A \vee \neg A) \qquad \Box(A \vee \neg A)$$

logical necessity $\sim$ validity

for all $M, M \models F \longrightarrow \Box F$

$$\forall P.[P \rightarrow \Box P]$$

Everything that is the case is so necessarily.

Follows from T2, T3 and D2.

There are no contingent “truths”.
Everything is determined.
There is no free will.
God’s existence makes no difference.

Many proposed solutions: Anderson, Fitting, Hájek, . . .

$$\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$$

Either a property is positive or its negation is (never both)

Are the following properties positive or negative?

$\lambda x.G(x)$ $\lambda x.human(x)$ $\lambda x.foreigner(x)$ $\lambda x.\neg foreigner(x), \ldots$

Solution:
"...positive in the moral aesthetic sense (independently of the accidental structure of the world). Only then the ax. true. [sic] ..."
- Gödel, 1970

$$\forall\phi[P(\neg\phi) \leftrightarrow \neg P(\phi)]$$

Either a property is positive or its negation is (never both)

Are the following properties positive or negative?

$\lambda x.G(x)$ $\lambda x.human(x)$ $\lambda x.foreigner(x)$ $\lambda x.\neg foreigner(x), \ldots$

Solution:
"...positive in the moral aesthetic sense (independently of the accidental structure of the world). Only then the ax. true. [sic] ..."
- Gödel, 1970

Part F:
Conclusions

Summary of Results

The (new) insights we gained from experiments include:

- Logic K sufficient for T1, C and T2
- Logic S5 not needed for T3
- Logic KB sufficient for T3 (not well known)
- We found a simpler new proof of C
- Gödel's axioms (without conjunct $\phi(x)$ in D2) are inconsistent
- Scott's axioms are consistent
- For T1, only half of A1 (A1a) is needed
- For T2, the other half (A1b) is needed

Summary of Results

Our novel contributions the theorem proving community includes

- Powerful infrastructure for reasoning with higher-order modal logic using existing proof assistants and HOL provers
- A new natural deduction calculus for higher-order modal logic
- Difficult new benchmarks problems for HOL provers
- Huge media attention

Conclusion

What have we achieved

- Verification of Gödel's ontological argument with HOL provers
  - exact parameters known: constant domain quantification, Henkin Semantics
  - parameters can be varied and experiments can repeated
- Gained some novel results and insights
- Major step towards Computer-assisted Theoretical Philosophy
  - see also Ed Zalta's *Computational Metaphysics* project at Stanford University
  - remember Leibniz' dictum — *Calculemus!*
- Interesting bridge between CS, Philosophy and Theology

Ongoing and future work

- Formalize and verify literature on ontological arguments
  - . . . in particular the criticism and improvements to Gödel
- Own contributions — supported by theorem provers

Some Comments and Reactions

I'm sure that God would be impressed with your proof, if only he existed :-)

Larry

Die Philosophen können so schön staunen.

Sie packen Dinge in Begriffe (gucken dabei in die Luft) werfen die Begriffe dann in ihre Philosophiekiste, schütteln ganz dolle, und freuen sich, dass ganz genau rauskommt, was sie vorher reingetan haben. Und das geht sogar, wenn eine Maschine die Kiste schüttelt.

Unerstaunt
