Computer-Assisted Analysis of the Anderson-Hájek Ontological Controversy

C. Benzmüller, L. Weber and B. Woltzenlogel Paleo

1. Introduction

We present an exemplary study in Computational Metaphysics, which is an emerging, interdisciplinary field aiming at the rigorous formalisation and deep logical assessment of rational, philosophical arguments on the computer. The particular focus here is on the ontological argument for the existence of God. More precisely, we further expand our studies on modern (modal) variants of the ontological argument that are essentially emendations of Kurt Gödel's seminal contribution [9], respectively, Dana Scott's variant of it [10]. In related experiments [1, 4, 6], we have already demonstrated that our technology is suited not only to formally assess the logical quality of the presented arguments, but it may even generate new knowledge about it. For example, the theorem prover Leo-II [2] detected an inconsistency in Gödel's original variant [9] of the argument, which is not the case for Scott [10]. We here assume some familiarity with these related experiments.

The particular motivation and context for work presented in this article is as follows: The axioms in Gödel's ontological proof [9, 10] (cf. Fig. 1) entail what is called modal collapse [22, 11]: the formula $\varphi \to \Box \varphi$, abbreviated as MC, holds for any formula φ and not just for $\exists x. God(x)$ as intended. This fact, which has been confirmed with higher-order automated theorem provers [4, 6] in our previous experiments, has led to strong criticism of the argument and stimulated attempts to remedy the problem. Hájek [19, 16] proposed the use of cautious instead of full comprehension principles, and Fitting [13] took greater care of the semantics of higher-order quantifiers in the presence of modalities. Others, such as C.A. Anderson [20],

This work was supported by German National Research Foundation (DFG) under grants BE 2501/9-1 and BE 2501/11-1.

A1 Either a property or its negation is positive, but not both:

$$\forall \varphi [P(\neg \varphi) \leftrightarrow \neg P(\varphi)]$$

A2 A property necessarily implied by a positive property is positive:

$$\forall \varphi \forall \psi [(P(\varphi) \wedge \Box \forall x [\varphi(x) \rightarrow \psi(x)]) \rightarrow P(\psi)]$$

T1 Positive properties are possibly exemplified:

$$\forall \varphi [P(\varphi) \to \Diamond \exists x \varphi(x)]$$

D1 A God-like being possesses all positive properties:

$$G(x) \equiv \forall \varphi [P(\varphi) \to \varphi(x)]$$

A3 The property of being God-like is positive:

C Possibly, a God-like being exists:

$$\Diamond \exists x G(x)$$

A4 Positive properties are necessarily positive:

$$\forall \varphi [P(\varphi) \to \Box P(\varphi)]$$

D2 An essence of an individual is a property possessed by it and necessarily implying any of its properties:

$$\varphi \ ess \ x \equiv \varphi(x) \land \forall \psi(\psi(x) \to \Box \forall y(\varphi(y) \to \psi(y)))$$

T2 Being God-like is an essence of any God-like being:

$$\forall x[G(x) \to G \ ess \ x]$$

D3 Necessary existence of an individual is the necessary exemplification of all its essences:

$$NE(x) \equiv \forall \varphi [\varphi \ ess \ x \to \Box \exists y \varphi(y)]$$

A5 Necessary existence is a positive property:

L1 If a God-like being exists, then necessarily a God-like being exists:

$$\exists x G(x) \to \Box \exists y G(y)$$

L2 If possibly a God-like being exists, then necessarily a God-like being exists:

$$\Diamond \exists x G(x) \to \Box \exists y G(y)$$

T3 Necessarily, a God-like being exists:

$$\Box \exists x G(x)$$

Figure 1. Scott's version of Gödel's ontological argument

Hájek [14] and Bjørdal [17], proposed emendations of Gödel's axioms and definitions. They require neither comprehension restrictions nor more complex semantics. Therefore, they are technically simpler to analyze with computer support. We have formalized those using the proof assistant Isabelle/HOL [15] together with the automated higher-order reasoners Leo-II [2], Satallax [7], Metis [12], and Nitpick [8]. Our formalizations employ the embedding of

higher-order modal logic (HOML) in classical higher-order logic (HOL) as introduced in previous work [4, 5]. We explored the effect of different domain conditions on the provability of lemmas, theorems and even axioms. This was motivated by a controversy between Hájek and Anderson regarding the redundancy of some axioms in Anderson's emendation. In *constant domain semantics*, the individual domains are the same in all possible worlds. In varying domain semantics, the domains may vary from world to world. This variation is technically encoded with the help of an existence relation expressing which individuals actually exist in each world. Quantifiers are then uniformly formalized as actualistic quantifiers (i.e. guarded by the existence relation). Our main results, which we have presented at the 1st World Congress on Logic and Religion [3], are summarized below. The corresponding formalizations, containing all the details, are available in the subdirectories Anderson, Hajek and Bjordal at github.com/FormalTheology/GoedelGod/blob/master/Formalizations/Isabelle/.

2. Results from our Experiments

For all emendations and variants discussed here, the axioms and definitions have been shown to be consistent and not to entail modal collapse.

The following definitions of redundancy, superfluousness and independence are used throughout this paper:

- **Def. 1.** An axiom A is **redundant** w.r.t. a set of axioms S iff S entails A.
- **Def. 2.** An axiom A is superfluous w.r.t. axiom set S iff $S \setminus \{A\}$ entails T3.
- **Def. 3.** An axiom A is independent of a set of axioms S iff there are models of S where A is true and other models of S where A if false.

For both **constant domain semantics** and **varying domain semantics**, the following results hold for *Anderson's Emendation* (cf. Fig. 2): T1, C and T3' can be quickly automated (in logics **K**, **K** and **KB**, respectively); the axioms A4 and A5' are proven redundant (the former in logic **K4B** and the latter already in **K**); a trivial countermodel (with two worlds and two individuals) for MC is generated by Nitpick (for all mentioned logics); all axioms and definitions are shown to be mutually consistent.

The redundancy of A4 and A5 is particularly controversial. Magari [21] claimed that A4 and A5 are superfluous, arguing that T3 is true in all models of the other axioms and definitions by Gödel. Hájek [19, pp. 5–6] investigated this further, and claimed that Magari's claim is not valid, but is nevertheless true under additional silent assumptions by Magari. Moreover, Hájek [19, p. 2] cites his earlier work² [16], where he claims (in Theorem 5.3) that for Anderson's emended theory [20], A4 and A5 are not only superfluous, but also redundant. Anderson and Gettings [18, footnote 1 in p. 1], in a footnote,

¹EDNOTE: This is misleading statement; we need to reword

²Although [16] precedes [19] in writing, it was published only 5 years later, in German.

A:A1 If a property is positive, its negation is not positive:

$$\forall \varphi [P(\varphi) \to \neg P(\neg \varphi)]$$

A2 A property necessarily implied by a positive property is positive:

$$\forall \varphi \forall \psi [(P(\varphi) \land \Box \forall x [\varphi(x) \to \psi(x)]) \to P(\psi)]$$

T1 Positive properties are possibly exemplified:

$$\forall \varphi [P(\varphi) \to \Diamond \exists x \varphi(x)]$$

A:D1 A God-like being necessarily possesses those and only those properties that are positive:

$$G_A(x) \equiv \forall \varphi [P(\varphi) \leftrightarrow \Box \varphi(x)]$$

A3' The property of being God-like is positive:

$$P(G_A)$$

C Possibly, a God-like being exists:

$$\Diamond \exists x G(x)$$

A4 Positive properties are necessarily positive:

$$\forall \varphi [P(\varphi) \to \Box \ P(\varphi)]$$

A:D2 An essence of an individual is a property that necessarily implies those and only those properties that the individual has necessarily:

$$\varphi \ ess_A \ x \equiv \forall \psi [\Box \psi(x) \leftrightarrow \Box \forall y (\varphi(y) \rightarrow \psi(y))]$$

T2' Being God-like is an essence of any God-like being:

$$\forall x[G_A(x) \to G_A \ ess_A \ x]$$

D3' Necessary existence of an individual is the necessary exemplification of all its essences:

$$NE_A(x) \equiv \forall \varphi [\varphi \ ess_A \ x \to \Box \exists y \varphi(y)]$$

A5' Necessary existence is a positive property:

$$P(NE_A)$$

L1' If a God-like being exists, then necessarily a God-like being exists:

$$\exists x G_A(x) \to \Box \exists y G_A(y)$$

L2' If possibly a God-like being exists, then necessarily a God-like being exists:

$$\Diamond \exists x G_A(x) \to \Box \exists y G_A(y)$$

T3' Necessarily, a God-like being exists:

$$\Box \exists x G_A(x)$$

FIGURE 2. Anderson's Emendation

rebutted Hájek's claim, arguing that the redundancy of A4 and A5 holds only under constant domain semantics, while Anderson's emended theory ought to be taken under Cocchiarella's semantics [23] (a varying domain semantics). Our results show that Hájek was originally right, under both constant and varying domain semantics.

Nevertheless, Hájek [14, p. 7] acknowledges Anderson's rebuttal, and apparently accepts it, as evidenced by his use³ of A4 and A5', as well as varying domain semantics, in his new emendation (named \mathcal{AOE}' [14, sec. 4], cf. Fig. 3), which replaces Anderson's A:A1 and A2 by a simpler axiom H:A12. Surprisingly, the computer-assisted formalization of \mathcal{AOE}' shows that A4 and A5' are still superfluous. Moreover, A4 and A5' are independent of the other axioms and definitions. Therefore, A4 and A5' are not redundant, despite their superfluousness.

Although Hájek did not notice the superfluousness of A4 and A5' in his \mathcal{AOE}'_0 , he did describe yet another emendation (his \mathcal{AOE}'_0 , cf. Fig. 4) where A4 and A5' are superfluous (though no claim is made w.r.t. to their redundancy), if A3' is replaced by a stronger axiom (H:A3) additionally stating that the property of actual existence is positive when it comes to God-like beings [14, sec. 5]. Formalization of \mathcal{AOE}'_0 shows that A4 is not only superflous, but also redundant. In addition, A5' becomes superfluous and independent. Surprisingly, a countermodel for the weaker A3' was successfully generated. This is somewhat unsatisfactory (for theistic goals), because it shows that \mathcal{AOE}'_0 does not entail the positiveness of being God-like.

Nevertheless, \mathcal{AOE}_0' is explicitly regarded by Hájek [14, p. 12] as just an intermediary step towards a more natural theory, based on a more sophisticated notion of positiveness. That is his final emendation (\mathcal{AOE}'' , cf. Fig. 5), which restores A3' and does use A4 and A5', albeit in a modified form (i.e. H:A4 and H:A5).

The formalization of \mathcal{AOE}'' shows that both H:A4 and H:A5 are superfluous as well as independent. For the old A5', no conclusive results were achieved.

Additionally, Anderson [20, footnote 14] (cf. Fig. 6) remarks that only the quantifiers in T3′ and in A:D2 need to be interpreted as actualistic quantifiers, while others may be taken as possibilistic quantifiers. Our computer-assisted study of this mixed variant shows that A4 is still redundant in logic **K4B**, but A5′ becomes independent (hence not redundant). Unfortunately, a countermodel for T3 can then be found.

The controversy over the superfluousness of A4 and A5 indicates a trend to reduce the ontological argument to its bare essentials. In this regard, already C.A. Anderson [20, p. 7] indicates that, by taking a notion of *defective* as primitive and defining the notion of *positive* upon it, axioms A:A1, A2 and A4 become derivable.

These claims have been confirmed by the automated theorem provers (in logic **K4B**). Within the same trend, the alternative proposed by Bjørdal [17] (cf. Fig. 7) achieves a high level of minimality.

He takes the property of being God-like as a primitive and defines (B:D1) the positive properties as those properties necessarily possessed by every God-like being. He then briefly indicates (B:L1) that B:D1 is logically equivalent, under modal logic **S4**, to the conjunction of D1', A2', A3' and A4'.

³A4 and A5 are used by Hájek [14, p. 11] in, respectively, Lemma 4 and Theorem 4.

H:A12 The negation of a property necessarily implied by a positive property is not positive:

$$\forall \varphi \forall \psi [(P(\varphi) \land \Box \forall x [\varphi(x) \to \psi(x)]) \to \neg P(\neg \psi)]$$

H:D1 A *God-like* being necessarily possesses those and only those properties that are necessarily implied by a positive property:

$$G_H(x) \equiv \forall \varphi [\Box \varphi(x) \leftrightarrow \exists \psi [P(\psi) \land \Box \forall x [\psi(x) \rightarrow \varphi(x))]]$$

A3' The property of being God-like is positive:

$$P(G_H)$$

A4 Positive properties are necessarily positive:

$$\forall \varphi [P(\varphi) \to \Box P(\varphi)]$$

A:D2 An essence of an individual is a property that necessarily implies those and only those properties that the individual has necessarily:

$$\varphi \ ess_A \ x \equiv \forall \psi [\Box \psi(x) \leftrightarrow \Box \forall y (\varphi(y) \rightarrow \psi(y))]$$

D3' Necessary existence of an individual is the necessary exemplification of all its essences:

$$NE_A(x) \equiv \forall \varphi [\varphi \ ess_A \ x \to \Box \exists y [\varphi(y)]]$$

A5' Necessary existence is a positive property:

$$P(NE_A)$$

L3 (1) The negation of a positive property is not positive:

$$\forall \varphi [P(\varphi) \to \neg P(\neg \varphi)]$$

(2) Positive properties are possibly exemplified:

$$\forall \varphi [P(\varphi) \to \Diamond \exists x \varphi(x)]$$

(3) If a God-like being exists, then necessarily a God-like being exists:

$$\forall x[G_H(x) \to \Box G_H(x)))]$$

(4) All positive properties are necessarily implied by the property of being God-like:

$$\forall \varphi [P(\varphi) \to \Box \forall x [G_H(x) \to \varphi(x)]]$$

L4 Being God-like is an essence of any God-like being:

$$\forall x[G_H(x) \to G_H \ ess \ x]$$

T3' Necessarily, a God-like being exists:

$$\Box \exists x G_H(x)$$

FIGURE 3. Hájek's First Emendation \mathcal{AOE}'

This has been confirmed in the computer-assisted formalization: A2' and A3' can be quickly automatically derived in logic \mathbf{K} . A4' can be proved in logic \mathbf{KT} (i.e. assuming reflexivity of the accessibility relation). For constant domain semantics, proving D1' is possible in logic $\mathbf{K4}$, whereas for varying domain semantics, a countermodel can be found even in logic $\mathbf{S5}$. Conversely, the proof that $\mathbf{B:}D1$ is entailed by $\mathbf{D1'}$, $\mathbf{A2'}$, $\mathbf{A3'}$ and $\mathbf{A4'}$ is possible already in logic

H:A12 The negation of a property necessarily implied by a positive property is not positive:

$$\forall \varphi \forall \psi [(P(\varphi) \land \Box \forall x [\varphi(x) \to \psi(x)]) \to \neg P(\neg \psi)]$$

 $\mbox{A:D1}$ A ${\it God\text{-}like}$ being necessarily possesses those and only those properties that are positive:

$$G_A(x) \equiv \forall \varphi [P(\varphi) \leftrightarrow \Box \varphi(x)]$$

H:A3 The property of being God-like and existing actually is positive:

$$P(G_A \wedge E)$$

T3' Necessarily, a God-like being exists:

$$\Box \exists x G_A(x)$$

FIGURE 4. Hájek's Second Emendation \mathcal{AOE}'_0

H:A12 The negation of a property necessarily implied by a positive property is not positive:

$$\forall \varphi \forall \psi [(P(\varphi) \land \Box \forall x [\varphi(x) \to \psi(x)]) \to \neg P(\neg \psi)]$$

D4 A property is positive # iff it is necessarily implied by a positive property:

$$P^{\#}(\varphi) \equiv \exists \psi [P(\psi) \land \Box \forall x [\psi(x) \to \varphi(x)]]$$

H:D1 A God-like being necessarily possesses those and only those properties that are positive $^{\#}$:

$$G_H(x) \equiv \forall \varphi [P^\#(\varphi) \leftrightarrow \Box \varphi(x)]$$

A3' The property of being God-like is positive:

$$P(G_H)$$

H:A4 Positive# properties are necessarily positive#:

$$\forall \varphi [P^{\#}(\varphi) \to \Box P^{\#}(\varphi)]$$

A:D2 An essence of an individual is a property that necessarily implies those and only those properties that the individual has necessarily:

$$\varphi \ ess_A \ x \equiv \forall \psi [\Box \psi(x) \leftrightarrow \Box \forall y (\varphi(y) \rightarrow \psi(y))]$$

D3' Necessary existence of an individual is the necessary exemplification of all its essences:

$$NE_A(x) \equiv \forall \varphi [\varphi \ ess_A \ x \rightarrow \Box \exists y [\varphi(y)]]$$

H:A5 Necessary existence is a positive property:

$$P^{\#}(NE_A)$$

FIGURE 5. Hájek's Third Emendation \mathcal{AOE}''

K. The provers also show that theorem T3' follows from B:D1, B:D2, B:D3, A:A1' and A5' already in logic **KB**. Bjørdal's last paragraph briefly mentions Hájek's ideas about the superfluousness of A5' and claims that it is possible, with (unclear) additional modifications of the definitions, to eliminate

D (Defective) is taken as primitive and P_{AS} (Positive) is defined.

AS:D1 A property is positive iff its absence necessarily renders an individual defective and it is possible that an individual has the property without being defective.

$$P_{AS}(\varphi) \equiv \Box(\forall x(\neg \varphi(x) \to D(x)) \land (\neg \Box \forall x(\varphi(x) \to D(x))))$$

A:A1' If a property is positive, its negation is not positive:

$$\forall \varphi [P_{AS}(\varphi) \to \neg P_{AS}(\neg \varphi)]$$

A2' A property necessarily implied by a positive property is positive:

$$\forall \varphi \forall \psi [(P_{AS}(\varphi) \land \Box \forall x [\varphi(x) \to \psi(x)]) \to P_{AS}(\psi)]$$

A4' Positive properties are necessarily positive:

$$\forall \varphi [P_{AS}(\varphi) \to \Box P_{AS}(\varphi)]$$

FIGURE 6. Anderson's Simplification

 G_B (God-like) is taken as primitive and P_B (Positive) is defined.

B:D1 A property is positive iff it is necessarily possessed by every God-like being.

$$P_B(\phi) \equiv \Box \forall x (G_B(x) \to \phi(x))$$

B:L1 B:D1 is logically equivalent in **S4** with the union of D1' and axioms A2', A3' and A4'.

$$B:D1 \leftrightarrow D1' \land A2' \land A3' \land A4'$$

B:D2 a maximal composite of an individual's positive properties is a positive property possessed by the individual and necessarily implying every positive property possessed by the individual.

$$MCP(\phi, x) \equiv (\phi(x) \land P_B(\phi)) \land \forall \psi((\psi(x) \land P_B(\psi)) \rightarrow \Box \forall y(\phi(y) \rightarrow \psi(y)))$$

B:D3 Necessary existence of an individual is the necessary exemplification of all its maximal composites.

$$NE_B(x) \equiv \forall \phi(MCP(\phi, x) \rightarrow \Box \exists y \phi(y))$$

A:A1' If a property is positive, its negation is not positive:

$$\forall \varphi [P_B(\varphi) \to \neg P_B(\neg \varphi)]$$

A5' Necessary existence is a positive property.

$$P_B(NE_B)$$

T3' Necessarily, a God-like being exists:

$$\Box \exists x G_B(x)$$

FIGURE 7. Bjørdal's Alternative

A5' from his theory as well. Without any additional modification, the automated reasoners show that A5' is independent, but actually not superfluous. All these results, with the exception of the aforementioned countermodel for D1', hold for both constant and varying domain semantics.

FIGURE 8. Summary of Results.

Figure 8 summarizes the results obtained by the automated reasoning tools. The following abbreviations are used: S/I = superfluous and independent; R = superfluous and redundant; S/U = superfluous and unknown whether redundant or independent; N/I = non-superfluous and independent; P = provable; P = provab

3. Conclusion

Using our approach (semantical embeddings of variants of higher-order modal logics in classical higher-order logic), the formalization and (partly) automated analysis of several variants of Gödel's ontological argument has been surprisingly straightforward. The provers not only confirmed many claimed results, but also exposed a few mistakes and novel insights in a long standing controversy. We believe the technology employed in this work is ready to be fruitfully adopted in larger scale by philosophers. Moreover, the technology is by now means restricted to metaphysics or philosophy, and further work includes similar applications in other areas, including, for example, law, politics and ethics.
